III. Project Details

Project Description

Quality improvement in healthcare is intended to ensure that health services are effective, safe and focused on the needs of the patient. Health systems in most countries, especially in low- and medium-income countries, are so burdened and stretched that quality is not given sufficient attention. The delivery of unsafe, unequal and inequitable health services will negate the intention of promoting health among the population. This theory-based and practice-focused training course is intended for staff in healthcare facilities, e.g., hospitals and clinics. The course offers the participants the opportunity to understand the complexity of health systems and how quality improvement initiatives could strengthen health systems.

Project Objective

By the end of the course, students will understand the critical role of quality improvement in strengthening health systems and achieving universal healthcare. They will explore its theoretical foundations, mechanisms like licensing and accreditation, and the use of evidence-based benchmarks for planning and implementation. Emphasizing harm-free care as a quality indicator, students will also identify resources needed to execute effective quality improvement initiatives, preparing them to drive meaningful change in healthcare.
